153591	Fix: Added a User field on a popup when the main screen contains an image	TS2	/ts/ts2/js/axdev.js

Installation Instructions – IFS files

1. Make a backup copy of these files:

Folder	Files to Copy for Backup
<aXes root folder> /ts/ts2/css	layout.css
<aXes root folder> /ts/ts2/js	axdev.js, axterm.js, axcoreexts.js, axlayout.js
<aXes root folder> /ts/dev	ts2tabstyles.css
<aXes root folder> /ts/screens	Extension_axDropdown.js, Extension_axInputStyle1.js Extension_axCheckbox.js Extension_axRadioButton.js Extension_axSpinEdit.js Extension_axMultitypeInputbox.js
<p>Note Carefully:</p> <p>Never backup existing extension definition files by copying or renaming existing files in the screens folder so that the backed up file names are still prefixed Extension_. Such file copies will remain in the system as valid extensions and may cause namespace duplication(s) that interfere with the proper execution of the replacement extension.</p>	

2. Replace the files listed in step 1 with the new files from this hotfix (**do not delete the existing files - just overwrite them so as to maintain their authorities**).
3. Repeat steps 1 -> 3 for any additional aXes server instances that you have created.
4. **Clear the browser cache of users to pick up the changed file(s).**
